## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1,2,4 and 9-12 are rejected under 35 U.S.C. 102(a) as being anticipated by Sawahashi et al (US 5,768,306).

Consider claims 1,9 and 12. Referring to Fig. 4, Sawahashi et al discloses a detecting device comprising a “storage means” (43), a “code generation means” (44), “a correlation value obtaining means” (45) and a “detecting means” (the rest of elements in Fig.4).

Regarding claims 2, 4 and 10 see col.6, ll.24-29. Regarding claim 11, see the accumulator (46).

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any

evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claim 3,5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sawahashi et al as applied to claim 2 above in view of Shou et al (US 5,910,948).

Sawahashi et al disclose all the subject matter claimed except for “a matched filter” as a means of obtaining correlation between the stored received signal and a predetermined code sequence. Shou et al describes that a short code is detected by a matched filter and a long code is detected by a sliding correlator. Thus, it would have been obvious to one skill in the art at the time the invention was made to modify Sawahashis et al’s sliding correlator to a matched filter for the purpose of detecting a short code and/or to add a matched filter for the purpose of detecting both a long code and a short code, as taught by Shou et al.

6. Claims 7 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Higuchi et al (US 6,167,037) teaches that a matched filter is used to detect short codes while a sliding correlator is used to detect long codes. See col.10, ll.54-60 in particular.
